

# Using iPhone Web Apps Offline In 5 Easy Steps

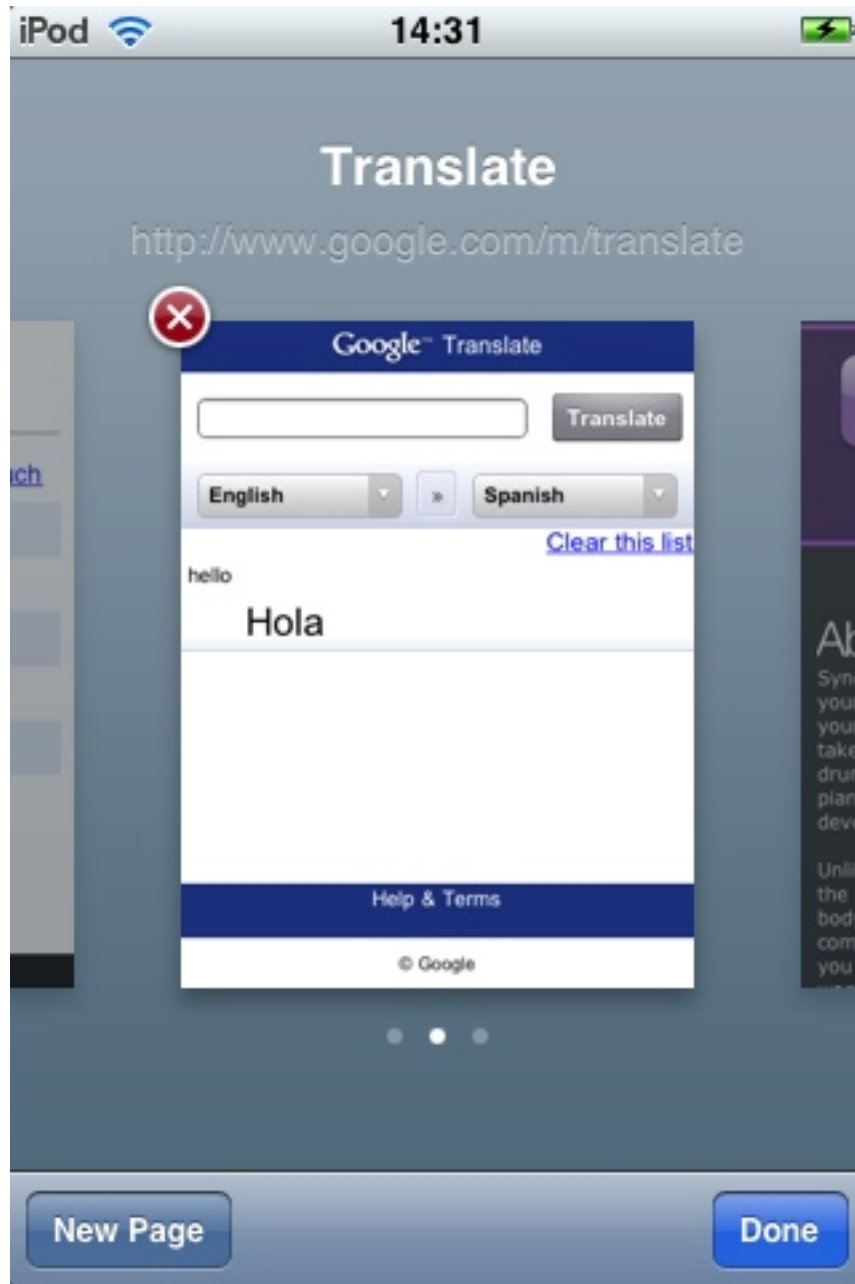

(Without using the data:/ hack and assuming they support the Database storage)

1) Go to your favourite web app in Safari

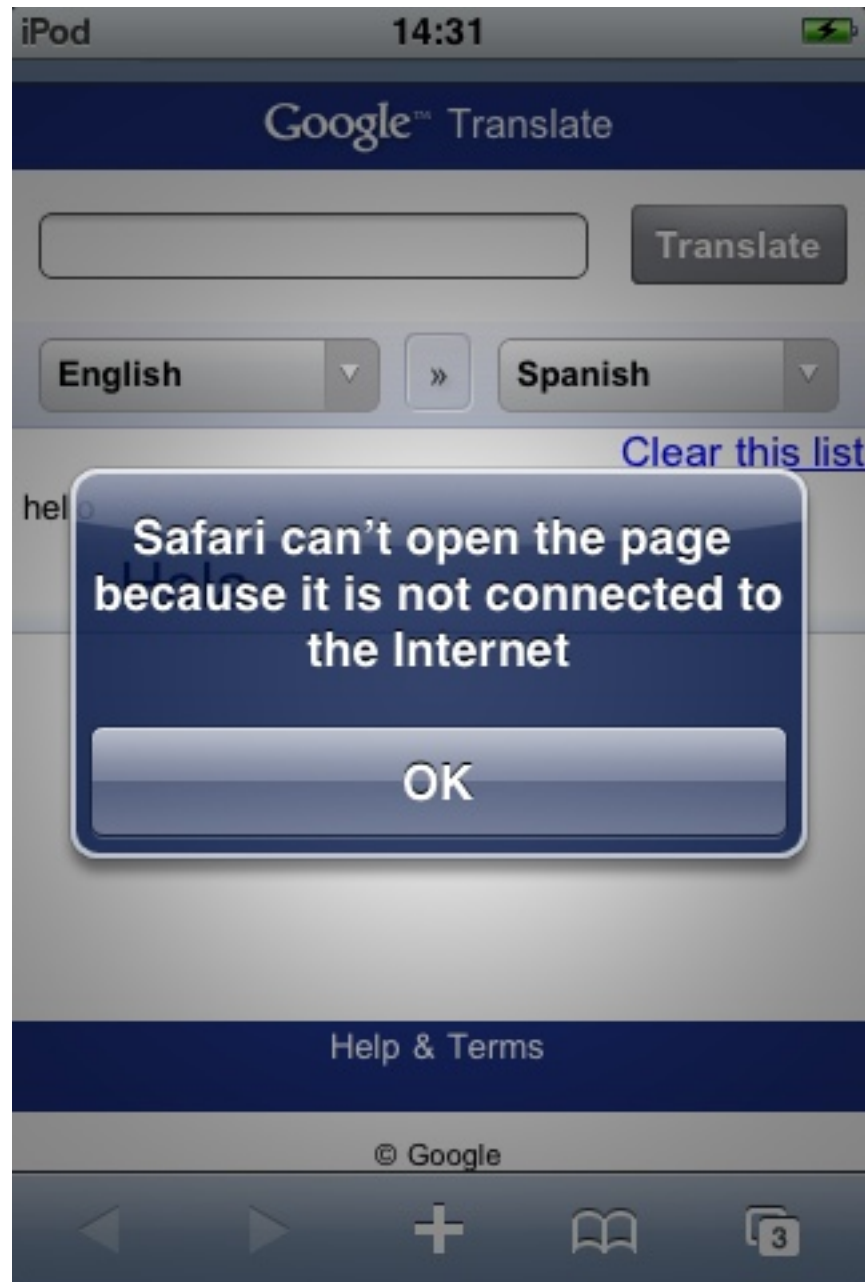

2) Add it to your home screen

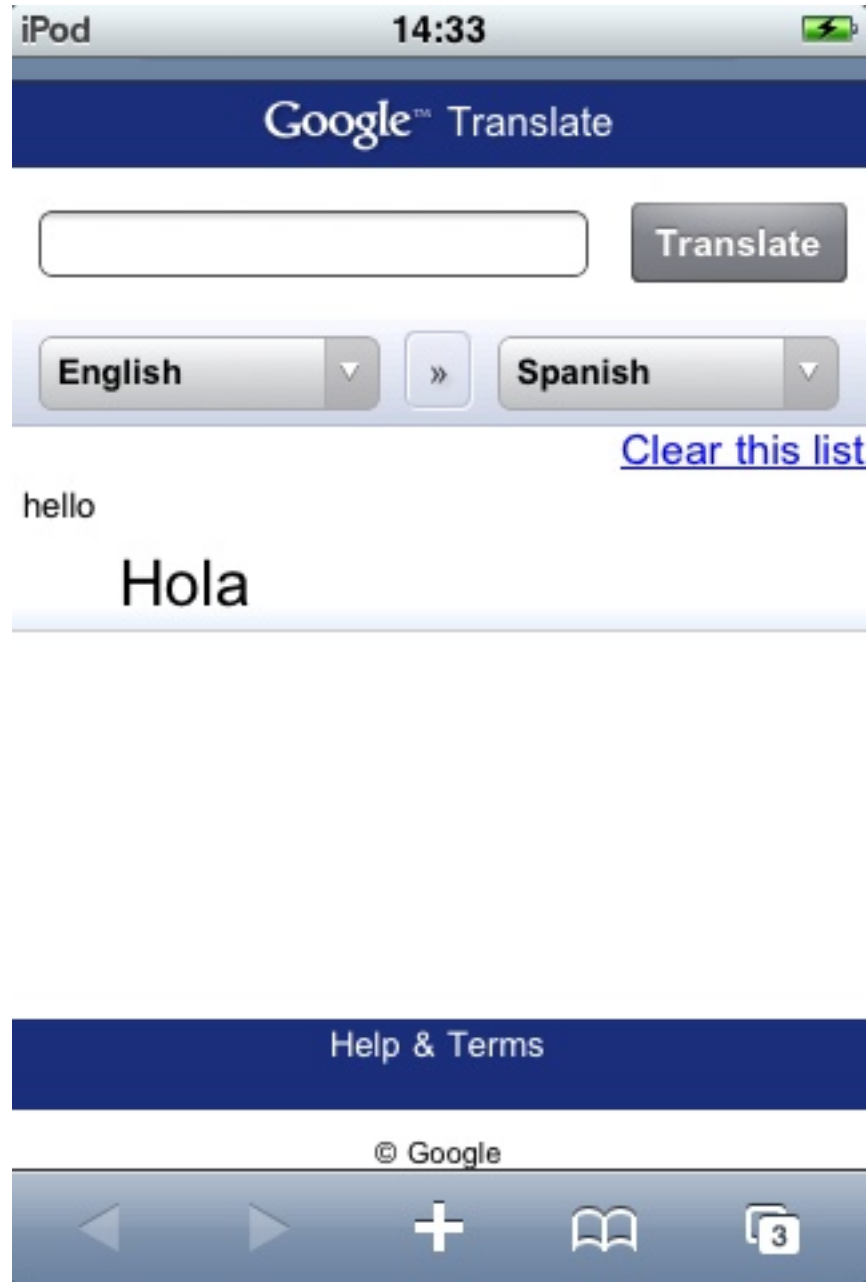

3) Make sure your web app stays open in a window

4) Go offline

5) Open the web app from your home screen

Hey presto! It still works! \*

\*(Just don't close the window!)
